

I drive a truck (semi) coast to coast while running midwest to the west coast. Xm radio helps keep me in touch with the changing environment due to extremely bad weather such as snow storms, ice storms, tornados, flooded roads, blinding rain storms, and high winds. The traffic channel I get lets me know where all the bad wrecks are in the city that im in with no interputions such as talk shows or music being played to where I can change my route to keep from being involved in a accident from being stopped in the middle of traffic while the interstate are closed due to accidents. The Xm radio should be praised for their comentiment and service to the safety and alerting us about the dangers that most radio stations that don't alert or tell us about. And most radio stations doesn't have the coverage that the general public needs to drive safely with out being involved in an accident. What is going on is reminding me theres no such thing as free trade in America. I think that NAB is jealous because Xm radio gives me the best service that I pay for. Compared to the poor service they give. This is not right for them to be able to do this.
